

Project Description:

The Donkey is simultaneously a modular furniture system and interactive object for a domestic space. Its function is determined by the module on the donkey's back, which is interchangeable based on needs of its user. Whether it is in the living room or the office, the donkey adds functionality and humor to its surroundings.

Currently mosform is looking for a manufacturing partner in order to bring the donkey to all kinds of users and spaces. With the ongoing process of designing new models, anyone should be able to find a fitting donkey for their needs.

The Modules:

- Stackable Stools: The stackable stool module is meant to bring togetherness and spontaneity to where it is being placed together with a donkey base. Up to 8 stools fit on one donkey, whereas the donkey itself can be used as a stool or table as well.
- Bookcase / Side table: The bookcase module adds shelf space and a practical top surface to the donkey. It can be carried around by its handle or safely placed on the donkey's back. Whether it is used to store books, toys or precious bottles of gin inside is decided by its user.

Designer Description:

Mosform was founded in 2022 directly after Marcel Mosform's graduation from Design Academy Eindhoven. All mosform objects are about simplicity, playfulness and creating a long-lasting companionship with their owners. Consolidating functionality, elegance and humor, mosform intends to make people smile and enrich their lives with original and whimsical designs.
